LP™ Series
Portable Media Centers

Portable Digital Entertainment Centers

ACE Connects you to the Digital World....Anywhere!

The Ace® LP™ series of Digital Entertainment systems brings the latest in audio and video content-management technology to any location. The power brought forward by the LP Series of **portable media centers** exceeds most engineering workstations. The LP™ series features Microsoft® Windows® XP Media Center Edition 2005, which integrates the functionality of individual A/V components into a single unit, complete with a common user interface and remote control. All Ace® LP™ series systems feature large, 17" WSXGA or WUXGA Screens and multiple storage options.

The four models in the Ace® LP™ line have many of the same capabilities as our LH™ series including integrated TV Tuners and the ability to **store, play,** and **burn** CD's and DVD's, **organize** digital photos, **record** live TV, **play** the latest computer games, and **download** movies and music tracks on demand anywhere there is an internet connection.

All units come with 4 or more built in speakers with subwoofer options plus an available"surround sound" home theater speaker system. In addition, the Ace® LP™series provides the ability to take your media center on the road and doubles as a fine gaming or video editing workstation for those interested in this type of portable workstation.
